

## IMPORTANT SAFETY INSTRUCTIONS

### YOUR SAFETY AND THE SAFETY OF OTHERS ARE VERY IMPORTANT

This manual and the appliance itself provide important safety messages, to be read and observed at all times.

 This is the safety alert symbol, pertaining to safety, which alerts users to potential hazards to themselves and others. All safety messages will follow the safety alert symbol and either the terms:

 **DANGER** Indicates a hazardous situation which, if not avoided, will cause serious injury.

 **WARNING** Indicates a hazardous situation which, if not avoided, could cause serious injury.

All Safety messages will tell you what the potential hazard is, tell you how to reduce the chance of injury, and tell you what can happen if the instructions are not followed.

- The appliance must be disconnected from the power supply before carrying out any installation work.
- Installation and maintenance must be carried out by a qualified technician, in compliance with the manufacturer's instructions and local safety regulations. Do not repair or replace any part of the appliance unless specifically stated in the user manual.

 **WARNING** If the information in this manual is not followed exactly, a fire or explosion may result causing property damage or injury.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this appliance.

#### What to do if you smell gas:

- Do not try to light any appliance.
- Do not touch any electrical switch.
- Do not use any phone in your building.
- Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.
- Installation and service must be performed by a qualified installer, service agency or the gas supplier.
- Use appliance in well ventilated rooms only.

### The electrical and gas connections must comply with local regulations.

- The appliance must be disconnected from the power supply before carrying out any installation work.
- Installation and maintenance must be carried out by a qualified technician, in compliance with the manufacturer's instructions and local safety regulations. Do not repair or replace any part of the appliance unless specifically stated in the user manual.
- Regulations require that the appliance is earthed.
- The appliance (class 3) is designed solely for private household use for cooking food. Do not use this appliance as a space heater to heat or warm the room. Doing so may result in carbon monoxide poisoning and overheating of the hob. The Manufacturer declines all responsibility for inappropriate use or incorrect setting of the controls.
- The appliance and its accessible parts may become very hot during use. During and after use, do not touch the heating elements of the appliance.
- Keep children less than 8 years of age away from the appliance and supervise them to ensure they do not play with it.
- This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand hazards involved. Cleaning and user maintenance shall not be made by children without supervision.

- If the surface is cracked, switch off the appliance to avoid the possibility of electric shock.
- Overheated oils and fats catch fire easily. Never leave the appliance unattended when cooking with fat and oil.
- The appliance is not intended to be operated by means of an external timer or separate remote control system.
- Do not use steam cleaners.
- Unattended cooking on a hob with fat or oil can be dangerous and may result in fire. NEVER try to extinguish a fire with water, but switch off the appliance and then cover flame, e.g. with a lid or a fire blanket.
- Danger of fire: do not store items on the cooking surfaces.
- The power cable must be long enough for connecting the appliance, once fitted in its housing, to the power supply.
- Use only flexible or rigid metal hose for gas connection.
- If necessary, the electrical power cable must be replaced exclusively with a power cable having identical characteristics to the original supplied by manufacturer (type H05V2V2-F 90°C or H05RR-F). This operation must be performed by a qualified electrician.
- The manufacturer cannot be held responsible for any injury to persons or animals or damage to property arising from failure to comply with these requirements.
- Do not use multiple plug adapters or extension cords.
- Do not pull the power supply cord in order to unplug the appliance.
- The electrical components must not be accessible to the user after installation.
- Do not touch the appliance with any wet part of the body and do not operate it when barefoot.
- The use of a gas appliance produces heat and humidity in the room. Make sure the room is well-ventilated, or install an extractor hood with exhaust duct.
- In case of prolonged use, additional ventilation may be necessary (by opening a window or increasing the hood extraction speed).
- After use, make sure the knobs are in off position and close the main gas supply cock or the gas cylinder valve.
- Keep the packaging materials out of the reach of children.
- Before cleaning or maintenance wait for hob to cool down.

**Warnings: if the glass ceramic surface should break or crack, refrain from using it and call the After-sales Service immediately. Any repairs or maintenance work on the appliance must be carried out exclusively by a qualified technician. Never touch the cooktop with any wet part of the body and do not operate it with bare feet.**

- Do not use the glass ceramic hob as a work surface or support surface.
- Do not switch on the electric hotplate without pots.
- Do not place plastic, aluminium foil, cloths, paper etc. on the cooking zone while it is still hot.

## SAVE THESE INSTRUCTIONS

### INSTALLATION

After unpacking the hob, make sure that it has not been damaged during transport. In the event of problems, contact the dealer or your nearest After-sales Service.

### TECHNICAL INFORMATION FOR THE INSTALLER

- **This product can be embedded in a worktop 20 to 60 mm thick.**
- **If there is no oven beneath the hob, insert a separator panel that has a surface at least equal to the opening in the work surface. This panel must be positioned at a maximum distance of 150 mm below the upper surface of the work surface but, in no case less than 20 mm from the bottom of the hob. In the case that you intend to install an oven beneath the hob, make sure that it is manufactured by Whirlpool and equipped with a cooling system. The manufacturer declines all liability if another brand oven is installed beneath the hob.**
- **Before installation, make sure that:**
  - **the local gas delivery conditions (nature and pressure) are compatible with the settings of the hob (see the rating plate and injector table);**
  - the outer surfaces of the furniture or appliances adjacent to the hob are heat resistant according to local regulations;
  - this appliance is not connected to a fume exhaust device. It shall be installed in accordance with current installation regulations. Particular attention shall be given to the relevant requirements regarding ventilation;
  - combustion products are discharged outdoors through specific hoods or wall and/or window mounted electrical fans.

## GAS CONNECTION

**WARNING**

This operation must be performed by a qualified technician.

- **The gas supply system must comply with local regulations.**
  - You can find specific local regulations for some countries in the paragraph "Reference to Local Regulations". If no information concerning your Country is given, please ask details to your Installer.
  - The connection of the hob to the gas pipe network or gas cylinder must be made by means of a rigid copper or steel pipe with fittings complying with local regulations, or by means of a continuous-surface stainless steel hose complying with local regulations. The maximum length of the hose is 2 linear metres.
  - Connect elbow (A)\* or (B)\* supplied with to the hob inlet main pipe and interpose the washer (C) supplied, in compliance with EN 549.
  - \* Use elbow (A) for France and elbow (B) for all other destinations.
- IMPORTANT: if a stainless steel hose is used, it must be installed so as not to touch any mobile part of the furniture. It must pass through an area where there are no obstructions and where it is possible to inspect it on all its length.**
- After connection to the gas supply, check for leaks with soapy water. Light up the burners and turn the knobs from max position 🔥 to minimum position 🔥 to check flame stability.

## ELECTRICAL CONNECTION

**WARNING**

This operation must be performed by a qualified technician.

**WARNING**

- **The electrical connections must comply with local regulations.**
- **The earthing of this appliance is compulsory by law.**
- **Do not use an extension cord.**

**IMPORTANT: the data relevant to the voltage and power absorption are indicated on the rating plate.**

## ASSEMBLY

After having cleaned the perimeter surface, apply the supplied gasket to the hob as shown in the figure.

Position the hob in the worktop opening made respecting the dimensions indicated in the Instruction.

**NOTE: the power supply cable must be long enough to permit its upward extraction.**

To secure the hob, use the brackets (A) provided with it. Fit the brackets into the relevant bores shown by the arrow and fasten them by means of their screws in accordance with the thickness of the worktop (see the following figures).

Top 20 mm

Top 40 mm

Top 30 mm

Top 60 mm

## ADJUSTMENT TO DIFFERENT TYPES OF GAS

**WARNING**

This operation must be performed by a qualified technician.

If the appliance is intended to operate with a different gas from the gas type stated on the rating plate and information label on the top of the hob, change the injectors. Remove the information label and keep it with the instructions booklet.

**Use pressure regulators suitable for the gas pressure indicated in the Instruction.**

- The gas nozzles must be changed by After Sales Service or a qualified technician.
- Nozzles not supplied with the appliance must be ordered from After Sales Service.
- Adjust the minimum setting of the taps.

**NOTE: when liquid petroleum gas is used (G30/G31), the minimum gas setting screw must be tightened as far as it will go. IMPORTANT: should you experience difficulty in turning the burners knobs, please contact the After Sales Service for the replacement of the burner tap if found to be faulty.**

## REPLACING THE INJECTORS (see the injector table in the Product Description Sheet)

- Remove grids (A)
- Extract burners (B)
- Using a socket spanner of the appropriate size, unscrew the injector (C)
- Replace it with the injector suitable for the new type of gas.

Before installing the hob, remember to affix the gas calibration plate supplied with the injectors in such a way that it covers the existing information relating to gas calibration.

## ADJUSTING MINIMUM GAS SETTING OF TAPS

To ensure that the minimum setting is correctly adjusted, remove the knob and proceed as follows:

- tighten screw to reduce the flame height (-);
- loosen screw to increase the flame height (+).

The adjustment must be performed with the tap in minimum gas setting position (small flame) 🔥.

- The primary air of the burners does not need to be adjusted.
- At this stage, light up the burners and turn the knobs from max position 🔥 to minimum position 🔥 to check flame stability.

Upon completion of adjustment, reseal using sealing wax or an equivalent material.

## REFERENCE TO LOCAL REGULATIONS

**IT**

### Connection to gas supply

Before connecting the appliance, make sure that the gas supply system complies with standards **UNI-CIG 7129** and **UNI CIG 7131**.

### Gas connection

The connection to the mains gas network or gas cylinder must be made using a rigid copper or steel pipe with fittings complying with standards **UNI-CIG 7129**, or using a continuous-surface stainless steel hose complying with standards **UNI-CIG 9891**.

The maximum length of the hose is 2 m.

The pressure control valves to be used must comply with the **UNI EN 12864** standard for gas cylinders and the **UNI EN 88** standard for piped methane gas.

**GR**

Ensure that the installation and gas connections are performed by a qualified technician, following the manufacturer's instructions and in compliance with current local safety regulations.

## AFTER-SALES SERVICE

Before calling the After-Sales Service, make sure you can give the following information:

- type of fault or problem;
- exact model (written on the label affixed to the instruction/warranty);
- service number that follows the word SERVICE on the rating plate under the hob and on the label affixed to instruction/warranty;
- your complete address and phone number.

If any repairs are required, please contact an authorised After-Sales Service, as indicated in the warranty.

**SERVICE** 0000 000 00000

## TROUBLESHOOTING GUIDE

If the hob will not operate correctly, before calling the After-Sales Service, refer to the Troubleshooting Guide to determine the problem.

### 1. The burner fails to ignite or the flame is not even

Check that:

- The gas or electrical supplies are not shut off and especially that the gas supply tap is open.
- The gas cylinder (liquid gas) is not empty.
- The burner openings are not clogged.
- The plug end is not dirty.
- All the burner parts have been positioned correctly.
- There are no draughts near the hob.

### 2. The burner does not stay lit

Check that:

- When lighting the burner, the knob has been pressed for enough time to activate the protection device.
- The burner openings are not clogged near the thermocouple.
- The end of the safety device is not dirty.
- The minimum gas setting is correct (see relevant paragraph).

### 3. The containers are not stable

Check that:

- The bottom of the container is perfectly flat
- The container is centered on the burner.
- The grids have not been exchanged or positioned incorrectly.

### 4. The electric hotplate does not work

Check that:

- The mains electrical supply is present.
- The knob is not turned to "0".

### 5. The electric hotplate does not switch off

Check that:

- The knob is turned to "0". If this is the case, disconnect the hob from the mains immediately by unplugging it.

If after the above checks the fault still occurs, get in touch with the nearest After Sales Service.

## CLEANING THE HOB SURFACE

### ! WARNING

Disconnect power before servicing.

- All the enamelled and glass parts should be cleaned with warm water and neutral solution.
- Stainless steel surfaces may be stained by calcareous water or aggressive detergents if left in contact for too long. Any food spills (water, sauce, coffee, etc.) should be wiped away before they dry.
- Clean with warm water and neutral detergent, and then dry with a soft cloth or chamois. Remove baked-on dirt with specific cleaners for stainless steel surfaces.

**NOTE:** clean stainless steel only with soft cloth or sponge.

- Do not use abrasive or corrosive products, chlorine-based cleaners or pan scourers.
- Do not use steam cleaning appliances.
- Do not use flammable products.
- Do not leave acid or alkaline substances, such as vinegar, mustard, salt, sugar or lemon juice on the hob.

## CLEANING THE HOB PARTS

- Grids, burner caps and burners can be removed to be cleaned.
- Clean them by hand with warm water and non-abrasive detergent, removing any food residues and checking that none of the burner openings is clogged.
- Rinse and dry
- Refit burners and burner caps correctly in the respective housings.
- When replacing the grids, make sure that the panstand area is aligned with the burner.
- Models equipped with electrical ignition plugs and safety device require thorough cleaning of the plug end in order to ensure correct operation. Check these items frequently, and if necessary, clean them with a damp cloth. Any baked-on food should be removed with a toothpick or needle.

**NOTE:** to avoid damaging the electric ignition device, do not use it when the burners are not in their housing.

## DECLARATION OF CONFORMITY

- This hob has been designed, constructed and marketed in compliance with:
  - safety requirements of "Gas" Directive 2009/142/EC (ex: EEC 90/396);
  - safety objectives of the "Low Voltage" Directive 2006/95/EC (which replaces 73/23/EEC and subsequent amendments);
  - protection requirements of EEC Directive "EMC" 2004/108/EC.
- This hob is suitable for contact with foodstuffs and complies with EEC (CE) Regulation n. 1935/2004.

## SAFEGUARDING THE ENVIRONMENT

### Disposal of packing material

The packing material is 100% recyclable and is marked with the recycle symbol (♻️). The various parts of the packing must therefore be disposed of responsibly and in full compliance with local authority regulations governing waste disposal.

### Scrapping the product

- This appliance is marked in compliance with European Directive 2002/96/EC, Waste Electrical and Electronic Equipment (WEEE).
- By ensuring this product is disposed of correctly, you will help prevent potential negative consequences for the environment and human health, which could otherwise be caused by inappropriate waste handling of this product.
- The symbol  on the product or on the accompanying documentation indicates that it should not be treated as domestic waste but must be taken to an appropriate collection centre for the recycling of electrical and electronic equipment.

## PRODUCT DESCRIPTION

1. Removable panstand grids
2. Semi-rapid burner
3. Semi-rapid burner
4. 4 ring burner
5. Dual zone glass ceramic hotplate
6. Semi-rapid burner control knob
7. Semi-rapid burner control knob
8. 4 ring burner control knob
9. Dual zone glass ceramic hotplate control knob
10. Electric hotplate operation LED
11. Residual heat indicator

### Symbols

● Tap closed

 Maximum flame

 Minimum flame

 Single zone hotplate

 Dual zone hotplate

## USE OF THE GAS BURNERS

- To ignite one of the burners, turn the relative knob anti-clockwise to the maximum flame setting .
- Press the knob against the control panel to ignite the burner.
- After the burner has ignited, keep the knob pressed for about 5 seconds to allow the thermocouple to warm up. This burner safety device shuts off the gas supply to the burner if the flame goes out accidentally (because of sudden draught, an interruption in the gas delivery, boiling over of liquids, etc.).
- **The device must not be pressed for more than 15 sec. If, after that time has elapsed, the burner does not remain lit, wait at least one minute before trying to light it again.**

The burner might go out when the knob is released.

This means that the thermocouple has not warmed up enough. In this case, repeat the operations described above.

## PRATICAL ADVICE FOR USING THE BURNERS

This hob has burners of different diameters. For better burner performance, please stick to the following rules:

- Use pots and pans with bottoms the same width as that of the burners or slightly larger (see table on the right).
- Only use flat-bottomed pots and pans.
- Use the correct amount of water for cooking foods and keep the pot covered.
- Make sure pots on the grates do not protrude beyond the edge of the hob
- In the case of pans with convex bottoms (WOK), use the support grille provided, which should be positioned only on the 4 ring burner.

Burner	Pot Ø
4 ring	From 24 to 26 cm
Semi-rapid	From 16 to 22 cm

**IMPORTANT: improper use of the grids can result in damage to the hob: do not position the grids upside down or slide them across the hob. Do not use:**

- Cast iron griddles, ollar stones, terracotta pots and pans.
- Heat diffusers such as metal mesh, or any other types.
- Two burners simultaneously for one receptacle (e.g. fish kettle).

## USE OF THE DUAL ZONE GLASS CERAMIC HOTPLATE

This hob is fitted with an electric hotplate which has two cooking zones that can be switched on separately, and a glass ceramic top. This combination delivers rapid and uniform transmission of heat, optimising cooking results and saving time.

- To switch on the single zone, turn the knob anti-clockwise from **0**. Power can be set from a minimum of **1** to a maximum setting of **12**.
- To switch on the dual zone, turn the knob further, past number **12**, to the symbol. Turn the knob clockwise to adjust the power which, in this case, will be in decreasing order, starting from a maximum setting of **(12)** to a minimum of **(1)**.
- To revert to cooking with the single cooking zone after the dual zone has been switched on, first switch the hotplate off by turning the knob to **0**.
- Next, repeat the operation described above.

**Note:** the electric hotplate is equipped with a residual heat indicator which switches on whenever the cooking zone reaches a dangerously hot temperature. This LED indicator remains lit even after the hotplate is switched off, only switching off once the temperature of the glass no longer poses a threat.

## PRACTICAL ADVICE FOR USING THE ELECTRIC HOTPLATE

- Use flat-bottomed pots and pans whose diameter is equal to, or slightly larger than, that of the cooking zones marked on the glass.
- Use the correct amount of water for cooking foods and keep the pot covered.

Use the table below as a guide in order to select the most suitable heat setting, positioning the knob between **1** and **12**.

Knob 1-12	Table for using the cooking zones
1-2	Melting butter, chocolate, etc.
2-3-4	Keeping food warm and reheating small quantities of liquid
4-5-6	Heating larger quantities, making custards and sauces
6-7	Gentle simmering, for example: boiled vegetables, spaghetti, soups, pot roasts, stews
7-8	For all fried food, cutlets, steaks, cooking without use of lid, for example: risotto
8-9-10	Browning meats, roast potatoes, fried fish and to boil large quantities of water
11-12	Brisk frying, griddling steaks, etc.

## HOW TO USE THE HOB

### WARNING

Do not let the burner flame extend beyond the edge of the pan.

**IMPORTANT: WHEN THE HOB IS IN USE, THE ENTIRE HOB AREA MAY BECOME HOT.**

- To ignite one of the burners, turn the relative knob anti-clockwise to the maximum flame setting.
  - Press the knob against the control panel to ignite the burner.
  - After the burner has ignited, keep the knob pressed for about 5-10 seconds to allow proper device operation. This burner safety device shuts off the gas supply to the burner if the flame goes out accidentally (because of sudden draught, an interruption in the gas delivery, boiling over of liquids, etc.).
  - The knob must not be pressed for more than 15 sec. If, after that time has elapsed, the burner does not remain lit, wait at least one minute before trying to light it again.**
- NOTE:** should particular local conditions of the delivered gas make the ignition of burner difficult, it is advisable to repeat the operation with the knob turned to small flame setting.

**The burner might go out when the knob is released.** This means that the safety device has not warmed up enough. In this case, repeat the operations described above.

## DIMENSIONS AND DISTANCES TO BE MAINTAINED (mm)

**NOTE:** if the distance "A" between the wall cabinets is between 600 mm and 730 mm, the height "B" must be a minimum of 530 mm. If the distance "A" between the wall cabinets is greater than the width of the cooktop, the height "B" must be a minimum of 400 mm. In case of installation of a hood above the cooktop, please refer to the hood instructions for the correct distance

## INJECTORS TABLE

CATEGORY II2H3+

Type of gas used	Type of burner	Injector marking	Rated thermal flow rate kW	Rated consumption	Reduced heat capacity kW	Gas pressure mbar
